

Dear Mission Control (Parents, Teachers, Staff, and Students),

We have had a successful shuttle launch. The orbiter has connected to our Huntsville Alabama Space Station without incident. We science specialists are proud of the cadets (otherwise known as “space cadets”). Although they have not endured any great hardships in their space travel, it has been a long trip. Now rested and fed, the cadets begin their exciting adventures and training for their missions. All systems are Go as the cadets learn new skills in logical problem solving. We ask that you please watch for the photographs of our young astronauts on Smugmug (located on the home base webpage).

As the Sun comes over our space station and warms us all, we say farewell for now.

Sincerely,

Space Station Scientists: Fowler, Lampic, Pond, Dahlen, East, & Wilburn
